Art Unit: 1625

Claims 1, 6,8,27,28 and 30 are again rejected under 35 U.S.C. 103(a) as being anticipated by Michaelson et al for the reasons of record.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement for the reasons of record.

Claim 11 is rejected under 35 USC 112 as being redundant with claim 2.

Applicant's arguments filed 6-5-2006 have been fully considered but they are not persuasive. Applicants' recitation of "chiral bishydroxamic acid" as the catalyst of course reads on a vast array of widely varying structures. See the instant record. The reference shows that good chiral induction of a particular chirality in the product epoxide cannot be achieved by chiral hydroxamic acids or chiral "bishydroxamic acids" in general. Of course if applicants argue against this thesis, then the obviousness rejection over the known chiral epoxidation using mono hydroxamic acids takes on greater weight.
